## Professional Summary

Computer Science undergraduate with software development experience at Toyota Kirloskar Motor. Skilled in React, Node.js, MongoDB, TypeScript, and Docker. Strong foundation in DSA and system design.

## Education

|                                                                                                                    |                          |
|--------------------------------------------------------------------------------------------------------------------|--------------------------|
| <b>ACS College of Engineering (VTU)</b><br>Bachelor of Engineering in Computer Science and Engineering   CGPA: 8.5 | Bangalore, India<br>2027 |
| <b>St. Joseph's Indian Composite PU College</b><br>PCMC (Class XII)   Percentage: 88%                              | Bangalore, India<br>2023 |
| <b>Shantiniketan Educational Institutions</b><br>ICSE (Class X)   Percentage: 92%                                  | Bangalore, India<br>2021 |

## Experience

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>Software Development Intern - Toyota Kirloskar Motor Pvt. Ltd.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Mar 2026 - May 2026 |
| <ul style="list-style-type: none"><li>Developed a full-stack Production Management &amp; Sign-off Portal with role-based access control, JWT authentication, and secure workflows for manufacturing user roles.</li><li>Built real-time dashboards for production tracking, OEE monitoring, inventory management, and backlog analysis using React, Express.js, MongoDB, and React Query.</li><li>Implemented digital approval workflows and audit logging, reducing paperwork and improving production traceability.</li></ul> |                     |
| <b>Machine Learning Intern - Alfido Tech (Remote)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Dec 2025 - Jan 2026 |
| <ul style="list-style-type: none"><li>Built and evaluated machine learning models for classification and regression tasks using Python, TensorFlow, and PyTorch, achieving strong predictive performance on real-world datasets.</li></ul>                                                                                                                                                                                                                                                                                      |                     |

## Projects

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |           |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>ML Drift Lens - Automated Monitoring of ML Classification Models</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | June 2026 |
| <ul style="list-style-type: none"><li>Engineered a microservices-based MLOps platform for continuous ML model monitoring, automated drift detection, re-training, and model version management using MLflow.</li><li>Built an event-driven distributed system enabling asynchronous communication across inference, monitoring, alerting, and retraining services, with a real-time dashboard for model health and drift visualization.</li><li><b>Tech Stack:</b> Python, FastAPI, React.js, Node.js, PostgreSQL, Docker, Redis Streams, MLflow, XGBoost, Scikit-learn</li></ul> |           |
| <b>Collabryx - Real-Time Collaborative Coding Platform</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Feb 2026  |
| <ul style="list-style-type: none"><li>Built a real-time collaborative coding workspace enabling simultaneous multi-user editing, with isolated code execution enforcing resource limits and execution timeouts for secure program execution.</li><li>Designed MongoDB-based workspace persistence and snapshot versioning, allowing users to save and restore coding sessions across visits.</li><li><b>Tech Stack:</b> React.js, Monaco Editor, Node.js, Express.js, Socket.IO, MongoDB, Docker, Tailwind CSS, Framer Motion</li></ul>                                           |           |

## Technical Skills

|                                                                                                                       |
|-----------------------------------------------------------------------------------------------------------------------|
| <b>Languages:</b> Java, Python, C++, JavaScript, TypeScript                                                           |
| <b>Web Development:</b> React.js, Node.js, Express.js, REST APIs, WebSockets, HTML, CSS                               |
| <b>Databases:</b> MongoDB, MySQL, PostgreSQL                                                                          |
| <b>DevOps &amp; Cloud:</b> Docker, Jenkins, AWS Cloud                                                                 |
| <b>Core CS:</b> Data Structures & Algorithms, Object-Oriented Programming, OS, DBMS, Computer Networks, System Design |
| <b>Tools:</b> Git, GitHub, Postman, Linux                                                                             |

## Certifications

|                                                                         |          |
|-------------------------------------------------------------------------|----------|
| <b>Oracle Cloud Infrastructure 2025 - Certified DevOps Professional</b> | Sep 2025 |
| <b>NPTEL - Introduction to Machine Learning</b>                         | Oct 2025 |
| <b>Udemy - Web Development</b>                                          | Nov 2024 |

## Achievements

- International Tech Bootcamp 2026- USIM Malaysia
- CODE NEURAL State-Level Hackathon - **Top 20 Finalist**
- Machine Learning Internship - **Awarded A+ (92.97%)** Performance
